

The World's First Wireless Soil Sensor Network

INTELLIGENT IRRIGATION CONTROL REDEFINED

UgMO's Service Agreement Advantages

- No capital investment
- UgMO installs equipment at no cost
- Service and maintenance included for entire term of contract
- Low fixed monthly payment
- Cancel at any time

No matter what size or type of property you own or manage and regardless of where you are located, UgMO has a cost effective water savings solution to meet your needs. Customized to soil type, climate and landscape design, UgMO controls the amount of water your grass and plantings are receiving. UgMO is not dependent on weather forecasting – UgMO measures the actual moisture levels in your soil. And because UgMO knows the exact moisture level of each irrigation zone, your plants and turf are never over or under watered. Water conservation, monetary savings and maintaining healthy plants has never been more accurate or easier. It's one of the smartest ways to save water.

Optimizes irrigation by measuring soil moisture zone by zone

Saves you between 30-80% of your irrigation water which translates to big \$\$ every year

Data uploads to the **ugmoknows** web application to any of your internet based devices

Allows you to utilize custom alert capabilities to monitor and manage your landscape

◀ UgMO® Irrigation Controller

The New Control Paradigm

The UgMO Irrigation Controller brings irrigation control into the 21st Century. Utilizing its fully digital interface and patented UgMO adaptive watering algorithm, UgMO breaks the traditional watering schedule paradigm. There are no run-times or cycle-times to set and no complex site variables to enter. Just tell it when watering is allowed and using the sensor data UgMO does the rest. The controller is also fully software upgradeable to incorporate future features – just like your favorite smartphone.

▶ UgMO Wireless Sensors

Zone-by-Zone Intelligence

The UgMO wireless sensors measure soil moisture levels and temperature every 10 minutes in the root zone of your plants and utilize the SenLink Network to broadcast this data to the UgMO Irrigation Controller.

▶ UgMO Knows®

Remote Intelligence

The most advanced wireless sensor system requires the most advanced analytical software package - UgMO Knows. Capable of organizing and analyzing the massive amount of data provided by thousands of sensors, UgMO's advanced software turns raw data into useful operating metrics.

Whether managing the health of a landscape or keeping track of water savings at a customer's location, UgMO Knows brings full irrigation control and management to your desktop.

◀ UgMO Alerts

Intelligence In Your Pocket

Manage on the go with remote control capabilities and delivery of system alerts through smartphone and tablet environments.
